Skander Abid Software Engineer

skanderabid53@gmail.com | Portfolio↗ | LinkedIn↗ | GitHub↗

Technical Skills

Frontend: TypeScript, JavaScript, React, Redux Toolkit, Next.js, Material UI, Tailwind CSS, shadcn/ui, Vite
Backend & Data: Node.js, NestJS, Express, Prisma, PostgreSQL, MongoDB, Redis, SQL
Testing & DevOps: Playwright, Vitest, GitHub Actions, CI/CD, Docker, Kubernetes, Vercel, Render

Experience

Software Engineer, Cognira↗ – Tunis, Tunisia Sep 2024 – Present

- Develop and maintain the frontend of **PromoAI**, Cognira's retail-AI platform used by enterprise teams to plan and forecast promotions, with **React, Redux Toolkit, and TypeScript**.
- Build complex, data-heavy interfaces and reusable components; improve state management and rendering performance, and modernise legacy code toward TypeScript.
- Contribute to the **Automation team** by writing Playwright end-to-end tests that run in CI, and work with backend, QA, and product teams from spec to release through code review.

  Stack: TypeScript, React, Redux Toolkit, Material UI, Vite, Vitest, Playwright, GitHub Actions.

Software Engineer Intern, Cognira↗ – Tunis, Tunisia Feb 2024 – May 2024

- Designed and shipped an internal agile project-management platform covering sprint planning, discussion boards, and document sharing.
- Built the Next.js frontend, the Express/MongoDB service layer, and real-time team chat, owning the work end-to-end.
- Ran the project on a Scrum cadence with sprint planning, reviews, and retrospectives.

  Stack: JavaScript, Next.js, React, Node.js, Express, MongoDB.

Software Engineer Intern, Cognira↗ – Tunis, Tunisia Jul 2023 – Aug 2023

- Built an internal event platform for Cognira's social committee to create and manage company events.
- Added voting, feedback, and suggestion flows so employees could shape upcoming events.
- Implemented frontend and backend in Next.js, with Firebase for auth/realtime and PostgreSQL for persistence.

  Stack: JavaScript, Next.js, React, Firebase, PostgreSQL.

Projects

CarCare – Vehicle Cost & Maintenance Platform GitHub Repo↗ | Live App↗

- Fullstack platform that turns fuel receipts, service invoices, insurance renewals, and odometer readings into a **true cost per kilometre** and flags what needs attention next.
- Built a **full-to-full fuel consumption engine** that handles partial fills and missed logs, plus a maintenance due/overdue engine for schedules by distance, time, or both.
- Layered NestJS API with I/O-free domain logic, exact-decimal money, SQL-side cost aggregation, membership-based authorisation, JWT refresh-token rotation, and Google sign-in.
- BullMQ workers for expiry and service reminders; integration tests against real PostgreSQL and Redis; GitHub Actions CI publishing Docker images to GHCR.
- **Stack:** TypeScript, Next.js, React, NestJS, Prisma, PostgreSQL, Redis, BullMQ, Tailwind CSS, shadcn/ui, Docker.

SplitEase – Expense Splitting App GitHub Repo↗ | Live App↗

- Fullstack expense-splitting app for groups, typed end-to-end and deployed on Vercel (frontend), Render (API), and Neon (PostgreSQL).
- Implemented a **greedy min-cash-flow algorithm** to compute the minimum set of transfers required to settle a group's debts.
- Clean routes – controllers – services backend boundary; optimistic React state for snappy UI updates.
- **Stack:** TypeScript, React (Vite), Node.js, Express, Prisma, PostgreSQL, Tailwind CSS, shadcn/ui.

Education

National School of Computer Sciences (ENSI), Tunisia↗ Sept 2021 – May 2024

Engineering Degree in Computer Science – Specialization in Finance and Information Systems. Coursework: Algorithms & Data Structures, Operating Systems, Databases, Distributed Systems, Software Engineering, Quantitative Finance, Statistics & Probability.
