

Skander Abid

Software Engineer

skanderabid53@gmail.com | Portfolio [↗] | LinkedIn [↗] | GitHub [↗]

Technical Skills

Languages: TypeScript, JavaScript, SQL
Frontend: React, Next.js, Tailwind CSS, shadcn/ui, Framer Motion
Backend: Node.js, Express, Prisma, PostgreSQL, MongoDB
Infrastructure: Docker, Kubernetes, Vercel, Render, Neon
Practice: Git, Code Review, Testing, CI/CD, Agile/Scrum

Experience

- Software Engineer, Cognira [↗] – Tunis, Tunisia

Sep 2024 – Present

 - Ship and maintain feature areas of **PromoAI**, Cognira's retail-AI platform used by enterprise pricing and promotion teams to plan and forecast.
 - Design component systems and UI architecture for complex tabular data, filters, and forecast flows in React and TypeScript.
 - Profile and resolve frontend performance issues across rendering, data loading, and state updates to keep the application fast under heavy data.
 - Work directly with API, UX, and QA to take work from spec to release through code review, testing, and clear documentation.
- Software Engineer Intern, Cognira [↗] – Tunis, Tunisia

Feb 2024 – May 2024

 - Designed and shipped an internal agile project-management platform — sprint planning, discussion boards, document sharing, and real-time chat.
 - Architected the Next.js frontend and an Express/MongoDB service layer, owning the work end-to-end.
 - Ran the project on a Scrum cadence with sprints, reviews, and retrospectives.
- Software Engineer Intern, Cognira [↗] – Tunis, Tunisia

Jul 2023 – Aug 2023

 - Built an internal event platform for Cognira's social committee covering event creation, voting, feedback, and suggestions.
 - Implemented both frontend and backend in Next.js, with Firebase for auth/realtime and PostgreSQL for persistence.

Education

- National School of Computer Sciences (ENSI), Tunisia [↗]

Sept 2021 – May 2024

Engineering Degree in Computer Science – Specialization in Finance.
Relevant coursework: Algorithms & Data Structures, Operating Systems, Databases, Software Engineering, Distributed Systems, Quantitative Finance, Statistics & Probability.

Projects

- SplitEase – Expense Splitting App

GitHub Repo [↗] | Live App [↗]

 - Fullstack expense-splitting app for groups, typed end-to-end with TypeScript, React (Vite), Node.js/Express, and Prisma over PostgreSQL.
 - Implemented a **greedy min-cash-flow algorithm** to compute the minimum set of transfers required to settle a group's debts.
 - Structured the backend around a clean routes – controllers – services boundary; used optimistic React state for snappy UI updates.
 - Deployed in production: frontend on Vercel, API on Render, PostgreSQL on Neon – fully functional, URL-shareable, no auth friction.
 - Stack:** TypeScript, React, Node.js, Express, Prisma, PostgreSQL, Tailwind CSS, shadcn/ui, Vercel, Render, Neon.
